

# Evidence–synthesis landscape of anthropogenic noise impacts on wildlife

Coverage is concentrated in vertebrates, marine environments, transportation noise, and individual–level biological outcomes

## Publication growth and synthesis approach

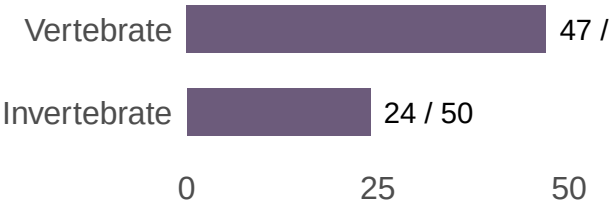

50 syntheses published from 2008–2025

■ Narrative/Descriptive (27) ■ Quantitative (23)

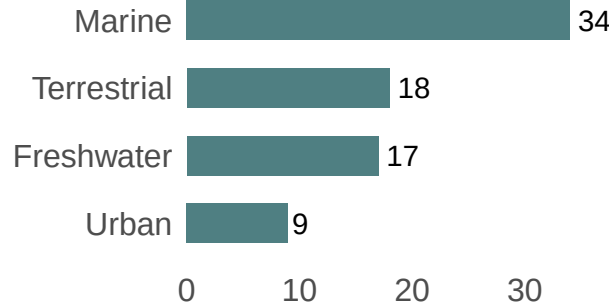

## Taxonomic scope

21 included both groups

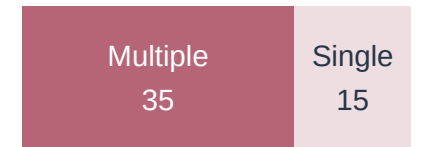

## Environmental scope

78 assignments · mean 1.56

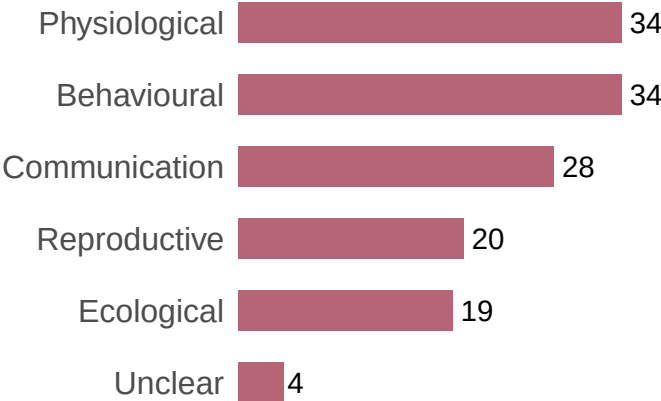

## Outcome coverage

35 covered multiple outcomes

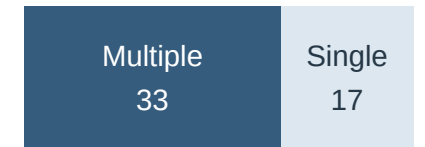

139 assignments · mean 2.78

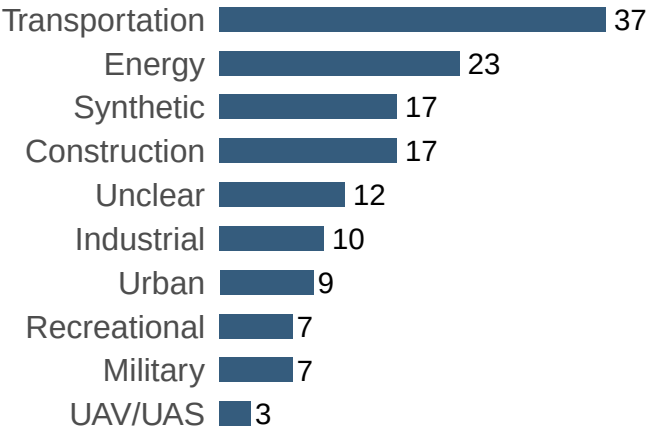

## Noise–source coverage

33 covered multiple source types

142 assignments · mean 2.84

Counts for taxa, environments, outcome categories, and noise sources are non–exclusive because one synthesis may cover multiple categories.
